

IN501 Unit 5 Assignment Rubric

Course: IN501 Fundamentals of Computer Programming

Criterion 1	Level III Max Points 35 points	Level II Max Points 29.75 points	Level I Max Points 24.5 points	Not Present 0 points	Criterion Score
-------------	-----------------------------------	-------------------------------------	-----------------------------------	-------------------------	-----------------

Criterion 1	Level III Max Points 35 points	Level II Max Points 29.75 points	Level I Max Points 24.5 points	Not Present 0 points	Criterion Score
Illustrate the Creation of User-Defined Functions.	Meets all criteria: - Correctly defines the <code>listSearch()</code> function with appropriate parameters (list, character, and potentially additional parameters). - Implements the <code>listSearch()</code> function using a recursive approach to efficiently search the list for matching names. - Correctly defines the <code>displayResults()</code> function with appropriate parameters (results list). - Effectively calculates the number of people in the results list. - Prints the results count and the list of people in alphabetical order.	Meets four criteria: - Correctly defines the <code>listSearch()</code> function with appropriate parameters (list, character, and potentially additional parameters). - Implements the <code>listSearch()</code> function using a recursive approach to efficiently search the list for matching names. - Correctly defines the <code>displayResults()</code> function with appropriate parameters (results list). - Effectively calculates the number of people in the results list. Prints the results count and the list of people in alphabetical order.	Meets three criteria: - Correctly defines the <code>listSearch()</code> function with appropriate parameters (list, character, and potentially additional parameters). - Implements the <code>listSearch()</code> function using a recursive approach to efficiently search the list for matching names. - Correctly defines the <code>displayResults()</code> function with appropriate parameters (results list). - Effectively calculates the number of people in the results list. Prints the results count and the list of people in alphabetical order.	Does not meet minimum criteria.	/ 35

Criterion 2	Level III Max Points 35 points	Level II Max Points 29.75 points	Level I Max Points 24.5 points	Not Present 0 points	Criterion Score
Function Usage and Testing.	Meet all criteria: - Creates the employees and customers lists as specified. - Prompts the user for input (list selection and character) and handles user input appropriately. - Correctly calls the listSearch() function with the user-provided list and character. - Passes the results list to the displayResults() function for output. - Ensures that the output matches the expected format and content, including the correct number of results, alphabetical ordering, and error messages	Meet four criteria: - Creates the employees and customers lists as specified. - Prompts the user for input (list selection and character) and handles user input appropriately. - Correctly calls the listSearch() function with the user-provided list and character. - Passes the results list to the displayResults() function for output. - Ensures that the output matches the expected format and content, including the correct number of results, alphabetical ordering, and error messages	Meet three criteria: - Creates the employees and customers lists as specified. - Prompts the user for input (list selection and character) and handles user input appropriately. - Correctly calls the listSearch() function with the user-provided list and character. - Passes the results list to the displayResults() function for output. - Ensures that the output matches the expected format and content, including the correct number of results, alphabetical ordering, and error messages	Does not meet any criteria.	/ 35

Overall Score

Level III 59.5 points minimum	Level II 49 points minimum	Level I 0.001 points minimum	Not Present 0 points minimum
